

Support

Lark Technology can offer full support on most aspects of electrical engineering.

We have an extensive mobile electrical team with backup from our offices and workshop in Woolpit.

We offer the capability of on site support for everything from breakdowns and fault finding through to regular testing and inspections.

With our in house services we can locate and supply replacement parts from a variety of sources. In some cases where equipment may be obsolete we are able to re-engineer systems to accept alternatives.

Our resources extend to some mechanical aspects with the facility for stainless steel fabrications.

Lark understands that good service requires reliability with a cost effective speedy response, we know that our reputation with customers reinforces these qualities.

If you have any electrical engineering issues requiring support from on site installations or software maintenance please contact us.
